# MODULAR TOUCH

## Design your switchboard

Every switch board is unique at our homes, design your own switchboard configuration with our modular touch switch

Scan for details

Touch switch is a smart device that enables you to turn on/off an appliance at one tap, whether it is manually or virtually. When the appliance is turned on, the device lights up blue in colour, therefore check the light of the device and know whether it is in use. It is a device that can be configured with an automation app and provide a smart look to your switches.

**Retrofit design:** All the variants of Touch Switch can replace two old mechanism switches each.

**Robust design:** Advanced firmware and rugged hardware design for long-lasting performance.

**Built-in S-Wi-Fi:** Equipped with secure Wi-Fi that ensures appliance control from any location

**Voice Command:** The automation app is compatible with all types of voice assistants such as Siri Bixby, Alexa, Google Assistant and more.

**Running hours:** Get the detailed running hours and control history of the device on your phone.

**Modern structure:** The device's exterior and interior design was made to provide elegant and modernized ambience to the user.

# POWER MODULES

[www.hawiot.com](http://www.hawiot.com)

## Control heavy load and track energy parameters

Hawiot Power Modules are GSM/WiFi-based devices that can control attached load up-to 75Kw, measure power consumption and monitor multiple energy parameters in your plant. These devices can trigger workflows if they notice any accidental glitches in the power supply.

Built-in Energy Monitoring System provides an easy way to retrieve and analyze power quality events automatically. Unlike traditional energy management systems, Hawiot system extracts the real-time energy consumption insights from your plant and provides you with useful data points on your Dashboard.

# MOTION & MICROWAVE SENSOR

Scan for details

Device that provides safety to the user, it also provides convenience to the user as the lights will automatically light up with the detection of the motion.

**PIR motion Sensor** has the technology to detect living beings with its thermal sensors. This sensor type is used in small areas such as a narrow hallway, front or back porch and other smaller spaces as it has the technology to detect the heat produced by a human being or an animal.

**Microwave Sensor** is a highly sensitive technology as it can detect leaves & trees blowing with the wind. This sensor type is used in large spaces such as an auditorium, driveway, garden, open office spaces and other oddly shaped open areas; it can detect through doors, glass and through thin walls.
